

Distiller 8 create PDF

Recommended settings for creating PDF/X1a with Distiller 8

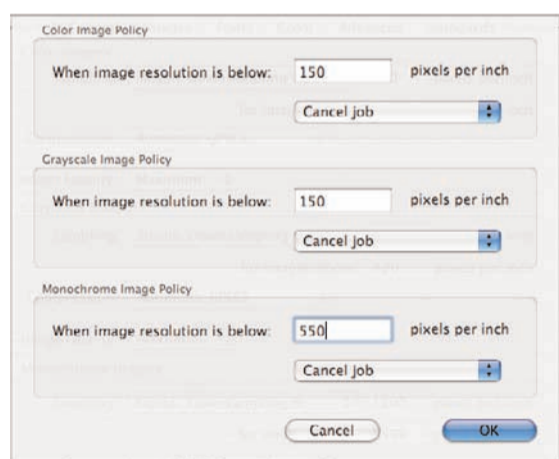

1. In settings select Edit Adobe PDF Settings. In General set as below. Change default page size to the size of your publication plus 25mm.

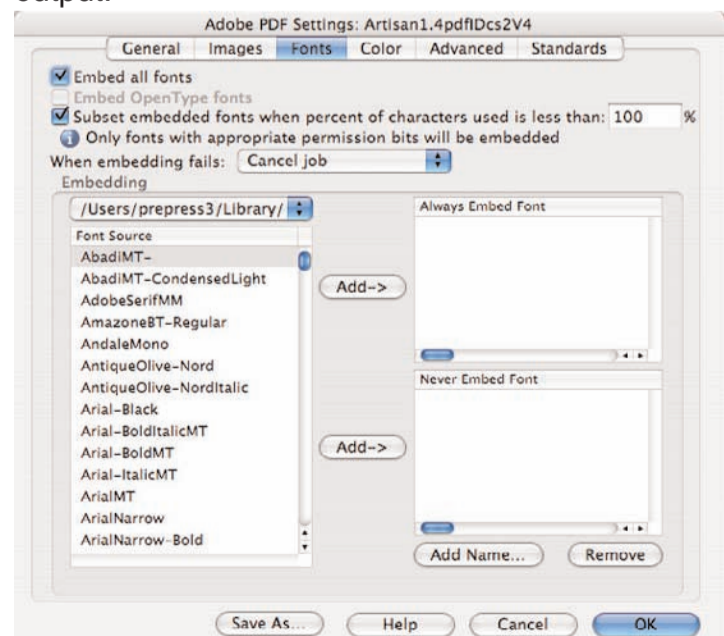

2. The Compression tab sets the compression and resolution of the content.

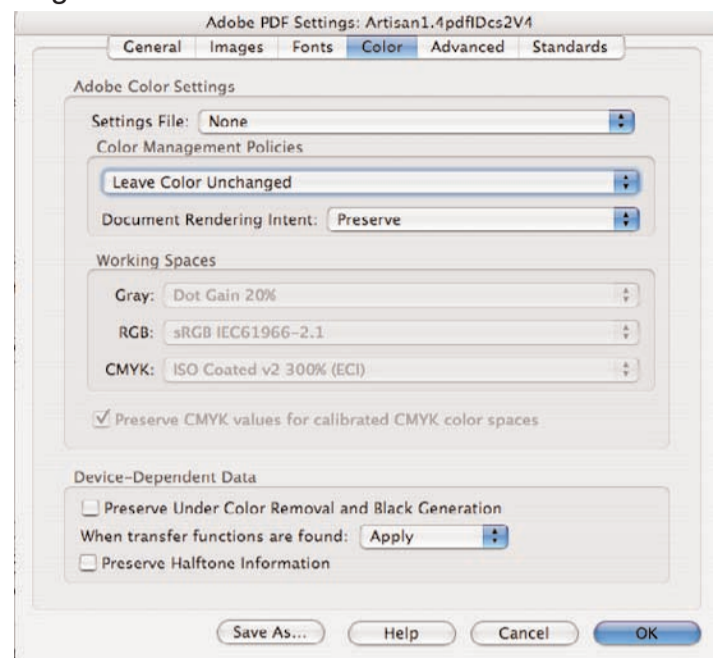

3. The Policy button on the images tab allows you to set rules for how to treat images in the Postscript file

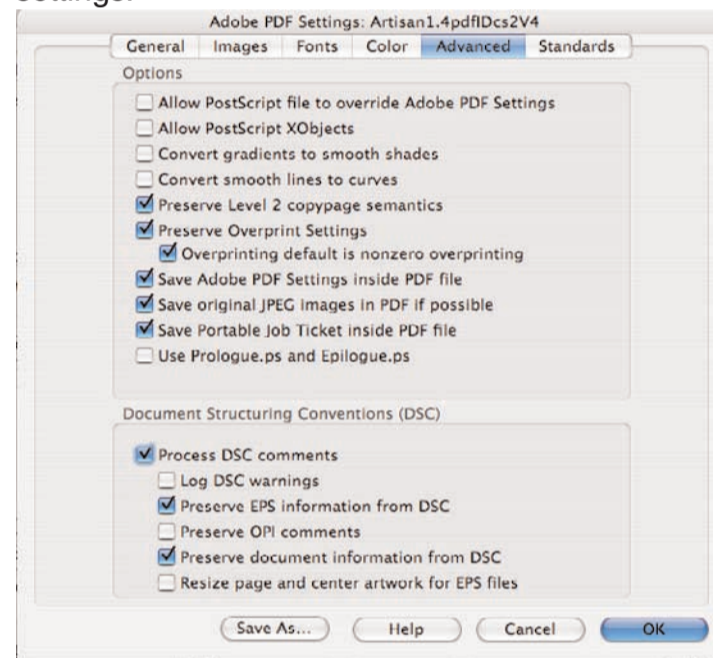

4. Fonts must be embedded to ensure correct output.

5. All colour issues should be dealt with in the original document.

6. The advanced settings are based on the PPA settings.

7. Output intent must reflect the printing space. Trapped must not be left to undefined.
